ABOUT AGRONOMIE

Agronomie is a specialised agro-tech company aggregating and accelerating access to finance for agro-productive use of clean energy from solar mini-grids, through an innovative mix of productive asset financing, training and technology based asset management thereby expanding rural economies in Nigeria. We are also a leading provider of end-to-end solutions for the procurement, operation and maintenance of productive use agro processing equipment. Our expertise spans a diverse range of agricultural industries, and we are committed to delivering innovative and sustainable solutions tailored to the unique needs of our clients through an innovative Hub & Spoke business model with a centralized tech “hub” for remote asset control and monitoring and localized “Spoke” of teams for operations and maintenance of productive asset thereby expanding rural economies in Nigeria on a large scale portfolio spread across the country. Our mandate includes the origination and management of Productive Use of Energy infrastructure, deal structuring and portfolio management

MISSION

Mission

innovatively unlock domestic finance for small and medium-sized infrastructure in unserved and under-served sectors that provide essential services to society, are recession resilient, demonstrate long term viability with predictable cashflows and reduce the impact of climate change.

The company's range of strategies and opportunities are tailored to preserve and grow institutional investments in sustainable infrastructure assets alongside proactive management of environmental, social and governance (ESG) considerations. Agronomie's investments directly address key sustainability challenges and provide innovative solutions that seek a positive impact while also achieving strong risk-adjusted financial returns in the agro market segments prevalent in each community:

TARGET SECTORS

Our investments will directly address key sustainability challenges and provide innovative solutions that seek a positive impact while also achieving strong risk-adjusted financial returns in the following agro market segments:

INVESTMENT APPROACH

Our investment approach holds great potential to deliver the three pillars of the SDGs: economic, environmental and social sustainability. We do this sustainably in partnership with our development partners, thought-leaders in blended finance, infrastructure, technology, and development finance to drive innovation beyond conventional asset management.

CORE COMPETENCE

PROJECT MANAGEMENT

Agronomie possesses a distinctive core competence in project management and execution, ensuring seamless implementation of Productive Use Equipment for agro processing initiatives. Our dedicated team excels in orchestrating the entire project lifecycle, from conceptualization to completion, with a focus on efficiency, precision, and client satisfaction.

We excel in Strategic Planning, Team Collaboration, Resource Optimization. Risk Management, Quality Assurance, Adaptability and Innovation, Communication Excellence, Compliance and Regulation. Additionally, we are in collaboration with Farm Warehouse for the effective project management of the operations and maintenance of procured agro equipment.

Additionally, we collaborate with Farm Warehouse for effective project management of the operations and maintenance of procured agro equipment.

By choosing Agronomie for your agro processing portfolio management and execution needs, you are partnering with a team that is dedicated to turning your vision into reality while maintaining the highest standards of quality, efficiency, and professionalism

NEEDS ASSESSMENT

Our team conducts comprehensive needs assessments to determine the feasibility of implementing Productive Use of Energy (PuE) agro-processing solutions in unserved and underserved communities. This involves engaging with local stakeholders to tailor solutions to their unique needs, assessing local resources and energy demands, evaluating infrastructure, and ensuring economic viability through cost-benefit analyses. We also analyze environmental impacts to promote sustainability, identify training needs to build local capacity, and collaborate with government agencies, NGOs, and other stakeholders to secure necessary support.

To date, we have completed 20 needs assessments in various communities across Abia, Benue, Cross River, Edo, Plateau, and Ondo. By leveraging these insights, we design energy-efficient, productive, and sustainable agro-processing solutions that enhance community productivity and economic growth.

PROCUREMENT

With a robust network of suppliers and strategic partnerships with Original Equipment Manufacturers, Agronomie excels in procurement services. We source high-quality materials and components to guarantee the reliability and longevity of agro processing equipment. Our procurement process is streamlined to meet project timelines and budgetary requirements. List of OEM's includes are in the Appendix below

OPERATION & MAINTENANCE

Agronomie in collaboration with Farm warehouse offers comprehensive operation and maintenance services to sustain the efficiency and longevity of agro processing equipment. Our dedicated teams are equipped with the latest diagnostic tools and follow preventive maintenance protocols to minimize downtime and ensure continuous operations.

GEOGRAPHICAL REACH

With a widespread presence, Agronomie has successfully executed projects across multiple states in Nigeria. Our ability to navigate diverse landscapes and regulatory environments enables us to deliver consistent, high-quality services globally.

CLIENT-CENTRIC APPROACH

We prioritize client satisfaction by understanding their specific needs and tailoring solutions accordingly. Our commitment to transparent communication, project management excellence, and continuous improvement has earned us the trust of clients in the agro processing industry.

OUR ACTIVITIES

AgroNomie has leveraged the vast experience of its sponsors in Energy and Infrastructure finance in developing the Asset Management Company (AssetCo) business model to ease access to and integration of IoT technology to enable remote access and control to the agro productive use assets in rural communities

AssetCo Model

- Investment into AgroNomie SPV
- SPV enters strategic partnership with OEMs & O&M
- Agro assets availed by SPV under AaS lease to off-takers via long-term asset lease contracts
- Execute power purchase agreement with mini-grid operators
- Secure credit enhancement for asset portfolio through guarantees to raise debt financing to grow asset portfolio

ORGANOGRAM

TEAM

JOJOLOLAMI NGENE

Director

Jojololami has over 11 years engineering consulting experience gained whilst working for various multi-disciplinary engineering firms in London. She has extensive project management experience in design, procurement, and implementation of power systems for some of the most state-of-the-art commercial and energy intensive projects – including Google London HQ and Facebook Data Centre, Lulea (their first in Europe)

Jojololami started her consulting career with Cundall Limited, Engineering Consultant (Electrical) in 2010 and in 2015 joined Norman Disney & Young, Engineering Consultant (Electrical) with key responsibilities as

Jojololami is technically astute, highly organized, process driven, attentive to detail and goal oriented. Jojololami holds a Masters' degree in Electrical Engineering from the University of Southampton in 2010, she majored in Power Generation, Power Systems Analysis, Power System Technology, High Voltage Engineering.

Ojo joined Agronomied in 2022 and has since been managing projects from planning through to execution. This includes coordinating with stakeholders and overseeing Needs Assessment exercises. Ojo manages all aspects of the projects, including community engagement, Productive Use of Energy (PUE) evaluations, and asset financing.

Additionally, Ojo develops and implements training programs for the operation and maintenance of assets. She collaborates on IoT-based solutions and identifies and mitigates risks to ensure project success. Her responsibilities also include tracking project progress and impact, and leading and communicating effectively with her team and stakeholders.

TEAM

JOHN EDOJA AKPOVWOWO

Project Manager/Agricultural Economist

Edoja John Akpovwovwo is a graduate of Agricultural Economics (BSc) and Agribusiness Management (MSc) with over 7 years of experience running agricultural and educational businesses from ideation to implementation. His key strengths include resiliently delivering outcomes and results, developing strategic partnerships, and simplifying complex processes. John is a dedicated team player, proactive in ensuring task completion in a swift, efficient, and effective manner.

He has hands-on experience working directly with farmers to improve their production output and increase the value added to their farm produce. As a researcher, he has conducted investigations and data gathering related to farmers' productivity, creating structures to enhance their output. He has set up agro startups, including TopFresh Agro Ventures, which manages agricultural enterprises for clients, and FarmerShop, an online agro-commerce store that helps farmers access urban consumers to sell their produce at better prices.

John has also worked on projects like the Business of Agriculture with PSAG, which educates youths in agriculture and aids farmers in accessing new and improved agricultural practices and equipment.

John is passionate, ambitious, and dedicated to continuous business improvement, he focuses on enhancing revenue and streamlining business operations.

John joined Agronomie in 2022 and serves as a Project Manager, aligning project execution with organizational goals and market trends. John develops comprehensive business plans, including objectives, strategies, financial projections, and market analyses to guide project direction. Additionally, He creates essential project materials such as questionnaires, programs of work, and budgets to ensure smooth initiation and implementation.

Analyzing data and drafting detailed reports, John provides actionable insights and recommendations to stakeholders and directors, facilitating informed decision-making. Effective communication is a key strength, with regular updating directors on project progress, challenges, and achievements. He is also excels in applying for grants, securing financial support through compelling proposals.

Focused on growth and profit maximization, John engages in business strategies and models, enhancing team productivity through effective role allocation and streamlined duties. By building and maintaining a high-performance culture, John ensures excellent service delivery to clients through clear, measurable, and action-oriented goals and customer-centric strategies.

TEAM

OLUFUNMILOLA ABRAHAM

Head, Legal/Company Secretariat

Oluwafunmilola holds a Bachelor of Laws degree from Olabisi Onabanjo University in 2008 and was called to the Nigerian Bar in 2009. She possesses significant experience in advising private and international clientele on a wide variety of transactions. She is also at the forefront of emerging areas of law such as Employment Law and Industrial dispute resolution.

Over the years, she has anchored transactions with several leading organizations in various sectors. Oluwafunmilola is versed in corporate and commercial practice. She is adept at providing legal and advisory support services in corporate governance, drafting and vetting of contracts, corporate finance, company secretarial and corporate compliance, employment law compliance, workforce restructuring, and outsourcing, protecting business assets, real estate, and due diligence.

LAMBERT SAVIOUR

Head, Agricultural Extension Expert

Lambert Saviour is a dedicated and experienced Agro field and Extension professional with a proven track record of managing various farm projects and commercial organizations. With a Master of Science in Extension Administration from Rivers State University of Science and Technology and a Bachelor of Agricultural Economics and Extension from the University of Port Harcourt, Lambert brings a strong educational background to his work.

His experience includes roles such as Field Representative at Fundco Capital Managers, Agricultural Extension Field Expert at LuLu Briggs Foundation, and Farm Manager at Ok Farm. In these positions, Lambert has demonstrated skills in educating rural farmers on modern agricultural practices, introducing proper irrigation systems, and implementing organic farming techniques.

Lambert's key skills include data analysis, social media management, and proficiency in Microsoft Office, Zoom, and Google Workspace. With his dedication to serving organizations and his expertise in agro field management, Lambert is well-equipped to contribute to the success of any agricultural project or organization.

TEAM

Lambert joined Agronomie in 2023 and serves as an Agro Field Lead, where he plays a vital role in supporting rural farmers and enhancing agricultural practices. In this capacity, he gathers insights and data into the agricultural systems used by rural farmers, ensuring a thorough understanding of their needs and challenges. Lambert excels in data analysis, utilizing the gathered information to identify potential improvements and offer effective solutions tailored to each community's needs. By assessing the strengths and areas for growth within these communities.

With a focus on education, Lambert teaches rural farmers about modern agricultural techniques, helping them adopt more efficient and sustainable practices. By introducing these innovative methods, he aims to improve productivity and the overall well-being of the farming communities.

Additionally, Lambert provides valuable recommendations on suitable machinery and equipment that can benefit the farmers, ensuring they have access to the tools necessary for optimizing their operations. Through these efforts, Lambert contributes to the advancement of rural agriculture and the empowerment of farming communities using Productive Use Equipment.

OGOLO RAPHAEL

Agricultural Extension Agent

Raphael Moses Ogolo is a dynamic Agro Field Expert with extensive experience in agriculture and rural community development. With a Bachelor of Agriculture from the University of Port Harcourt and a background in farm management, Raphael brings a wealth of knowledge to his work.

His career highlights include roles such as Farm Manager at Idah Farms, where he successfully managed crops such as Plantain, Cassava, Maize, and others, optimizing farming practices to maximize quality and yields. Additionally, as a Consultant/Farm Supervisor at Nice Business Enterprise, Raphael demonstrated his ability to develop feasibility plans and oversee farm operations.

With Agronomie, Raphael traveled across Nigeria, interacting with community leaders, gathering data from farmers, and analyzing information to design strategies for maximizing resources and improving agricultural practices. With a strong commitment to community development and a passion for agriculture, Raphael is well-equipped to make a transformative impact in any agricultural project or organization.

TEAM

Raphael serves as a Field Representative at AGRONOMIE Funding Managers since 2023, actively engaging with various communities across Nigeria to enhance agricultural practices. In this role, he travels extensively to interact with community leaders, gather data from farmers and processors, and ensure a thorough understanding of local agricultural systems.

Raphael excels in data analysis, utilizing the gathered information to identify potential improvements and offer effective solutions tailored to each community's needs. By assessing the strengths and areas for growth within these communities, He helps to design strategies that maximize available resources and drive sustainable development.

Through these efforts, he contributes to the advancement of rural agriculture, fostering stronger, more resilient farming communities by providing actionable insights and practical recommendations for improvement.

EMMANUEL OGBUCHE

Energy Expert

John Emmanuel Ogwuche is a highly skilled and innovative individual specializing in Solar Energy Systems design and implementation. With a Bachelor's degree in Industrial Physics from the Federal University of Agriculture- Makurdi, Benue State in 2018 and extensive hands-on experience, John has a proven track record of success in various roles within the renewable energy sector.

His expertise includes Design and analysis of Solar Energy Systems for Mini-Grids, Commercial & Industrial, and Residential applications, Proficiency in software such as Helioscope, Homer, PVsyst, AutoCAD, and Odyssey for system design and simulation, Energy auditing and cost-benefit analysis for Solar Energy Systems, Installation, repair, and maintenance of Solar Hybrid Mini-grids and standalone systems, Exceptional communication skills, both written and verbal, facilitating effective team collaboration and client interactions.

John's commitment to excellence, coupled with his passion for renewable energy and problem-solving, makes him a valuable asset in any organization striving to promote sustainable energy solutions.

TEAM

Emmanuel serves as a Electrical Engineer at AGRONOMIE Funding Managers, specializing in the design and analysis of Solar Energy Systems for Mini-Grids, Commercial and Industrial (C&I) applications, residential projects, and interconnected Mini-Grids. With expertise in using software and web-based applications like Helioscope, Homer, PVsyst, AutoCAD, and Odyssey, Emmanuel excels in designing and simulating efficient Solar Energy systems.

He is responsible for reviewing electrical design and audit documents to ensure compliance and effectiveness. Managing the project database, Emmanuel maintains accurate and up-to-date records for seamless project execution. Conducting cost-benefit analysis, and evaluates the financial viability of Solar Energy Systems, ensuring optimal investment decisions.

Additionally, Emmanuel designs Bills of Quantities (BOQ) for Solar Energy Systems, providing detailed and accurate project cost estimates. Through these efforts, He plays a crucial role in advancing sustainable energy solutions, driving innovation, and delivering high-quality service to clients.

OZIOMA CHINEDU
ESG Adviser - AquaEarth

Chinedu Ozioma is an environmental and social scientist/consultant with extensive experience in advising and de-risking over 20 projects and transactions across the oil and energy, infrastructure, real estate, and utilities sectors. Currently, she is engaged as an E&S Safeguards Scientist with AquaEarth Consulting, where she has both desk and field-based responsibilities for planning, implementing, and facilitating permitting for major capital projects and transactions. Chinedu holds a bachelor's degree in Environmental Management from Chukwuemeka Odumegwu Ojukwu University and has earned over ten professional certifications from reputable institutions such as the World Bank, United Nations, IFC, and GEF.

Chinedu served as the ESG Team Lead for the Infracredit project, ensuring the integration of environmental, social, and governance (ESG) principles into the project's framework. She led efforts to identify and mitigate potential ESG risks, developed comprehensive sustainability strategies, and ensured compliance with relevant regulations and standards. Chinedu's leadership and expertise were instrumental in enhancing the project's sustainability and securing stakeholder confidence.

TEAM

EDWARD CHIDEBERE GIDEON

Electrical/Electronics Engineer - Farm Warehouse

Edward Chidiebere Gideon is a seasoned Electrical/Electronics Engineer with a proven track record of efficiently addressing service requests while upholding the highest standards of quality. With a keen eye for detail and a knack for effective communication, Edward excels in interpreting blueprints and managing projects seamlessly. His expertise spans across various domains including electrical installations, solar mini grid design, and power electronics, making him a versatile asset in any engineering project.

Edward's proficiency extends to industrial control systems and adherence to safety regulations, ensuring the smooth functioning and security of electrical systems. With a Higher National Diploma (HND) in Electrical/Electronics Engineering (Power and Machines) from the Federal Polytechnic, Bida in 2017 and ongoing pursuit of a Master's in Project Management in Rome Business School, he combines technical prowess with strategic management skills.

Edward is deeply committed to delivering excellence in residential electrical work, leveraging renewable energy technology, and fostering capacity building within his field. His dedication to quality, coupled with his continuous pursuit of knowledge and skills development, positions him as a valuable contributor to any engineering endeavor.

Edward Chidiebere Gideon worked with Agronomie in planning the implementation work for the Productive Use Equipment, focusing on optimizing the integration of electrical and renewable energy solutions to enhance productivity and efficiency in agricultural operations. His role involved assessing the energy needs, designing appropriate systems, and ensuring the implementation aligns with safety and regulatory standards. Through this project, Edward demonstrated his ability to apply technical expertise in practical, impactful ways within the agricultural sector.

PORTFOLIO

Agronomie has executed several projects ranging from needs assessments, procurement, and installations of PUE (Productive Use of Energy) agro equipment, to the management of agro- processing equipment, among others. Our extensive portfolio showcases our track record of delivering quality services. Notably, in Jos, Angwan Rina, and Shimankar, we deployed two PUE assets but faced operational challenges due to grid integration issues. The lessons learned from these experiences are now being applied to enhance the success of our current and future projects.

Here are some of the projects in our portfolio that back our commitment to delivering quality services:

ANGWAN RINA, PLATEAU STATE

In Angwan Rina, Plateau State, Agronomie played a pivotal role in transforming aspirations into reality through a comprehensive blend of project assessment & management, financial services, and project execution. Our engagement in this community exemplifies our commitment to sustainable development and the empowerment of local economies.

- a. Needs Assessment for Electrification Viability: We began with a detailed needs assessment of the electrified community, focusing on the feasibility of establishing Agricultural Productive Use Equipment (PuE). Our experts ensured that our solutions aligned perfectly with the community's aspirations and needs.
- b. Commissioned Project - PuE Agro-Processing Pilot: Following the successful assessment, we were commissioned to execute a PuE Agro-Processing Pilot. This initiative aimed to leverage the Mini Grid to drive economic growth, emphasizing sustainable agro-processing to benefit the local population.
- c. Supply, Installation, Commissioning, and Management: We managed the entire process of supplying, installing, commissioning, and overseeing a Milling Processing Plant. Every step, from sourcing equipment to final commissioning, was executed to ensure optimal performance.
- d. Collaboration with Mini-Grid Developer - GVE: Partnering with GVE, a leading Mini-Grid Developer, we integrated our agro-processing project with broader electrification efforts, creating a synergistic impact on the community's socio-economic landscape. This pilot project allowed us to test the MoU with the mini-grid, conduct assessments, acquire and onboard agro processors for lease, handle procurement and implementation/construction, and manage operations and maintenance (O&M). The Angwan Rina project exemplifies how our expertise in financial services and project execution can turn aspirations into enduring success stories.

GALLERY

PORTFOLIO

CALABAR, DARWAY COAST

In Cross Rivers, we undertook a meticulous needs assessment analysis of four unserved and unelectrified communities. Our endeavors synchronize with the imminent commencement of Mini-Grid operations, a collaborative effort with Darway Coast.

a. Needs Assessment: Our journey began with a thorough needs assessment, identifying challenges and opportunities in each community. By engaging with these communities, we gained insights that shaped our intervention strategy, revealing both pressing needs and untapped potential.

b. Implementation in Progress : The strategy developed from the needs assessment will be put into action. We have worked on electrification and tailored solutions for the agrarian and fishing communities, in collaboration with mini-grid provider. We have an MoU with Darway Coast, completed the assessment and procurement planning, and are awaiting the readiness of the DISCO to deploy PuE assets. Our execution will start once the mini-grid installation is complete and operational.

c. Synchronizing with Mini-Grid Operations - A Powerhouse Partnership: Our efforts align seamlessly with the upcoming Mini-Grid operations, highlighting our strategic partnership with Darway Coast. By coordinating our initiatives, we enhance energy access and create a self-sustaining ecosystem where power drives economic and social progress.

d. Mini-Grid Developer - Darway Coast: Partnering with Darway Coast, a respected Mini-Grid Developer, adds depth to our efforts. Together, we combine our expertise to revolutionize the energy landscape in Cross Rivers. Darway Coast's commitment to innovation matches our vision, creating synergy that propels these communities toward sustainable energy and economic prosperity.

GALLERY

PORTFOLIO

ABIA, BENUE, EDO, ONDO & RIVERS STATE

In collaboration with Aquaeearth for Infracredit, we led a project aimed at empowering agrarian communities across Abia, Benue, Edo, Ondo, and Rivers States. We blend our expertise in project management, agribusiness, and energy solutions to bring about significant, sustainable development in these regions. We conducted a detailed needs assessment and implementation Plan of nine unserved and unelectrified communities, envisioning a future of growth powered by abundant energy. Our efforts align with the upcoming Mini-Grid operations in partnership with three (3) developers, Darway Coast, ACOB and Prado.

a. Needs Assessment: Our journey began with an in-depth needs assessment, uncovering the challenges and aspirations of each agrarian community. By immersing ourselves in these unique locales, we identified pressing needs and unlocked their latent potential laying the groundwork for impactful interventions.

b. Synchronizing with Mini-Grid Operations: Our initiatives are synchronized with the upcoming Mini-Grid operations

c. Leading with Expertise:. We lead the team with unparalleled expertise from our project management, agribusiness, and energy professionals. This leadership is pivotal in:

i.Assessment: Conducting thorough assessments to understand and address community-specific needs.

ii.Onboarding Agro-Processors: Facilitating the integration of agro-processors to enhance local agricultural value chains.

iii.Procurement and Implementation Planning: Ensuring efficient procurement processes and meticulous planning for implementation across multiple sites.

At Agronomie, our commitment extends beyond electrification; it encompasses the cultivation of prosperity. Abia , Benue, Cross River, Edo, Ondo and Rivers States are not just geographies on the map; they are canvases where our advisory and financial services paint a picture of empowerment and growth.

GALLERY

PORTFOLIO

ONDO STATE - GREEN KIOSK PROJECT

In Ondo State, Agronomie is leading efforts to empower connectivity through financial services, collaborating with Hotspot Network Limited on the Power Utilization Efficiency (PUE) Green Kiosk Project. Using solar-powered kiosks, we aim to serve underserved communities, providing not just power, but access, innovation, digital inclusion (financial, educational, data, entertainment etc) and economic empowerment.

a. Access to Finance: Agronomie provides tailored financial services to support Hotspot Network Limited, enabling the realization of transformative projects. Our financial backing helps bridge gaps and unlocks technological advancements in rural communities.

b. PUE Kiosk: The PUE Kiosk pilot blends sustainable electrification with advanced telecommunication solutions, empowering communities with access to information, education, and economic opportunities. This project symbolizes inclusive development in Ondo State.

c. Sustainable Impact - Beyond Electrification: Our approach focuses on sustainable impact through financial services and collaboration with Hotspot Network Limited. The success of this pilot sets the stage for scalability and replicability in other communities seeking to harness energy and connectivity.

At Agronomie, we catalyze transformation through financial support and technological innovation, redefining progress one empowered community at a time. Join us in our commitment to empowering communities through connectivity.

GALLERY

BLACK SOLDIER FLY

A SUSTAINABLE JOB REPLACEMENT SOLUTION FOR FUTURE IMPLEMENTATION PROJECTS

Under Agronomie's ESG component, job creation is key, and our assessment work across 20 communities showed that electrification could lead to job loss of existing manual labour at agro processing locations, to solve this challenge Agronomie, had to seek alternative that did not require special skills, can be implemented in each community, is sustainable as a source of income for the community and adds value to the sustainable development goals in the community.

the team came up with the Black Soldier Fly (BSF) farming as the most suitable alternative to job losses and we are currently conducting a pilot of the business model with the aim to adopt then across our portfolio's.

The Black Soldier Fly (BSF) business model presents a sustainable and innovative solution for job creation and economic development. This model capitalizes on the BSF's ability to convert organic waste into high-quality protein (maggots) for animal feed and nutrient-rich organic fertilizer, contributing to waste management and agricultural productivity thereby presenting a sustainable solutions that address waste challenges. The BSF business model offers a viable solution by transforming organic waste into valuable resources, creating job opportunities, and promoting environmental sustainability. This model can be implemented across every community in Nigeria, particularly in rural areas along with the PuE deployment to manage the waste and convert them to

BUSINESS MODEL COMPONENTS

1. Waste Collection and Segregation:
 - o Sources of Organic Waste: Organic waste will be sourced from farms, markets and agro processing plants.
2. BSF Breeding and Rearing:
 - o Breeding Facilities: A breeding facility for the BSF will be established where adult BSFs can lay eggs. These facilities will provide optimal conditions for BSF reproduction, including temperature, humidity, and shelter.
 - o Larvae Rearing: Once the eggs hatch, the larvae (maggots) will be reared in controlled environments. The larvae will feed on the collected organic waste, converting it into protein-rich biomass.

- 
3. **Harvesting and Processing:**
 - o **Harvesting Maggots:** The larvae are harvested at their peak nutritional value. The harvested maggots are processed into various forms, such as dried maggot meal or fresh maggots, for use as animal feed.
 - o **Residual Waste:** After the larvae have consumed the organic waste, the residual material can be processed into high-quality organic fertilizer.
 4. **Training and Capacity Building:**
 - o Training programs will be provided for local communities, emphasizing BSF farming techniques, waste management, and business skills.
 5. **Quality Control and Assurance:**
 - o Implement strict quality control measures to ensure the safety and nutritional value of maggot-based animal feed.
 - o Regularly test the organic fertilizer for nutrient content and pathogen levels to guarantee its effectiveness and safety.

Social and Environmental Benefits

1. **Job Creation:**
 - o **Direct Employment:** Creation of jobs in BSF breeding, rearing, processing, and facility maintenance.
 - o **Indirect Employment:** Additional job opportunities in waste collection, transport, marketing, and distribution.
2. **Waste Management:**
 - o **Reduction in Organic Waste:** Significant reduction in organic waste, mitigating environmental pollution and greenhouse gas emissions.
 - o **Resource Recovery:** Transformation of waste into valuable resources, promoting circular economy principles.
3. **Food Security:**
 - o **Sustainable Animal Feed:** Provision of affordable, high-quality animal feed, enhancing livestock productivity and food security.
 - o **Soil Health:** Improvement of soil fertility through the use of organic fertilizer, leading to increased crop yields.
4. **Community Empowerment:**
 - o **Capacity Building:** Empowerment of local communities through training and skill development in BSF farming and waste management.
 - o **Economic Development:** Stimulation of local economies through the creation of new markets and business opportunities.

Through careful planning, strategic partnerships, and community engagement, the BSF business model can be successfully implemented as a job replacement solution in various regions, driving economic and social progress for future generations .

GALLERY

PARTNERS

At Agronomie, our success is built on strong partnerships with industry leaders and innovators. We collaborate with a diverse range of partners, from energy providers to original equipment manufacturers (OEMs) and implementation experts. Each partnership is carefully crafted to ensure the highest standards of quality, efficiency, and innovation in our projects.

In this chapter, we introduce our valued partners who play a crucial role in our mission to drive sustainable development and empower communities through advanced agro-processing solutions. These collaborations enable us to deliver comprehensive and impactful solutions, transforming aspirations into reality across

FARM WAREHOUSE

FARM WAREHOUSE is an agritech company provide value to small holder farmers and off-takers in the agricultural value chain. From micro credits, to insurance, to compact scalable processing equipment and warehousing facilities, we eliminate the inefficiencies that exist in the sector and strive to make agriculture more sustainable. Our and e-commerce platform ensures that our community can access a variety of commodities, inputs, equipment at the best prices.

Farm Warehouse is experienced in conducting PUE implementation and as an OEM, we leverage their procurement by buying from them and we partner with them on the implementation of the PUE.

As the on-field implementation partner, Farm Warehouse will be responsible for executing the planned activities as outlined by Agronomie. This involves deploying necessary resources, such as equipment and personnel, to the project sites and ensuring that all tasks are carried out efficiently and effectively. Farm Warehouse will also be involved in resolving any operational challenges that may arise during the implementation phase, as well as providing technical expertise and support where needed as well as Revenue collection from the beneficiaries and ensuring compliance to the payment terms. Additionally, Farm Warehouse will collaborate closely with Agronomie to maintain clear lines of communication and ensure alignment with project objectives throughout the implementation process.

AQUAEARTH

AquaEarth Consulting Limited (AquaEarth Consulting) is a member company of the AquaEarth Group, which also includes AquaEarth Energia and AquaEarth Technologies.

AquaEarth Consulting specializes in providing strategic solutions tailored to the unique needs of businesses. Our expertise spans environmental and social governance (ESG), sustainability, and performance enhancement. We are committed to maximizing the success of our clients by offering customized services that drive efficiency, compliance, and growth.

PARTNERS

As part of our comprehensive service offerings, AquaEarth Consulting provides critical ESG services, including field data collection and reporting for the Infracredit project. Our team conducts thorough field investigations to gather accurate and relevant data, ensuring that all environmental and social aspects of the project are meticulously documented. We then analyze this data to produce detailed reports that inform decision-making and facilitate compliance with regulatory and sustainability standards.

Our performance enhancement partners work closely with clients to identify opportunities for improvement, develop strategic plans, and implement solutions that enhance operational performance. By integrating our deep industry knowledge with cutting-edge technologies and best practices, AquaEarth Consulting ensures that our clients achieve their goals while maintaining a strong commitment to sustainability and social responsibility.

Partnership	Company	Logo	Description
Mini Grid Developers	GVE		renewable energy solution provider with a focus on providing solar system solutions to unserved and underserved communities and economic clusters In Nigeria.
	Darway Coast		Leading provider of sustainable and cost effective energy solutions for businesses and households.
	ACOB Lighting		Targeted to provide clean, affordable and sustainable power through renewable power solutions to underserved and unserved solutions.

PARTNERS

Partnership	Company	Logo	Description
ESG Consultants	AquaEarth		AquaEarth Consulting is focused on providing advisory services related to earth, water and environment.
Rural Telephony	Hotspot Network Limited		Focused on delivering wireless communication and broadcast network communication
Equipment Manufacturers (OEM)	Niji LuKas Group		value-driven conglomerate providing critical end-to-end solution to Africa's agriculture sector
	Nova Technologies		Manufacturer of high quality agricultural and cottage industrial machinery. We just don't manufacture and sell machines
	Okeke Casmir Enterprise		We are a leading global brand that supplies agro manufacturing and industrial equipments or machineries
	Best Royal Agro		Involved in food production, processing, sales of quality Agricultural equipment.
	Zebra milling		Developers of sustainable technology to serve rural areas on their agricultural task.

PARTNERS

Partnership	Company	Logo	Description
Equipment Manufacturers (OEM)	Bennie Agro Ltd		A renowned agro machinery manufacturers in Nigeria
	ECOM group (Micromec)		An integrated business operating in over 40 major producing countries worldwide
	Alayan metal fabrication		An agricultural company that fabricates machines locally, it is located in Lagos Nigeria.
	DOINGS Group		International manufacturer that specializes in comprehensive starch and flour processing including cassava processing equipment. They have a warehouse in Nigeria and are currently developing their factory in Nigeria.
	Zhengzhou Maosu Machinery Co.,Ltd		Professionally engaged in the development, design, manufacture and sale of many kinds of food machinery.
	China Impact Sourcing		End to end supply chain solution for the off-grid market.

PARTNERS

Partnership	Company	Logo	Description
Consultants/ Procurement Partners	Farmwarehouse		Farm Warehouse is an agritech company provide value to small holder farmers and off-takers in the agricultural value chain. From micro credits, to insurance, to compact scalable processing equipment and warehousing facilities, we eliminate the inefficiencies that exist in the sector and strive to make agriculture more sustainable. Our and e-commerce platform ensures that our community can access a variety of commodities, inputs, equipment at the best prices
	UnoTelos		Multi Systems integrator providing design, build, manage and optimize customized networks, software and VAS solutions, which are tailored to strategically meet our customers goals and requirements
	PowerTech Nigeria Limited		We design, build, manage and optimize customized networks, software and VAS solutions, which are tailored to strategically meet our customers goals and requirements
Systems Specialist and Integrator	Transilient Technologies Limited		Serving the manufacturing, telecommunication and industrial sectors with emphasis in electro-mechanical engineering

LESSONS LEARNT

Our journey in Angwan Rina, Plateau State, stands as a pivotal chapter that has propelled us to new heights in delivering unparalleled service to our clients. Among the valuable lessons learned, one has emerged as the catalyst for our commitment to excellence – the imperative of synergy among key stakeholders.

LESSON IN SYNERGY

In Angwan Rina, we witnessed the transformative power of collaboration. One of the core lessons etched into our ethos is the vital necessity for seamless synergy among Mini-Grid Developers, Agricultural Experts, Engineering/Fabricators/OEMs, and Energy Experts. This realization has become the cornerstone of our approach to ensuring efficient and effective installation and commissioning of Agro productive Use Energy projects.

FABRICATION CHALLENGES

One poignant example unfolded in the realm of fabrication. The Engineer, without aligning with the Energy Expert and Mini grid developers, unilaterally altered the agreed horsepower of the engine from 3hp to 5hp. This deviation, although seemingly minor, had significant consequences post-installation.

STARTUP LOAD MISMATCH

Post-installation, a stark revelation emerged – the startup load surpassed the Mini-Grid's capacity, leading to frequent tripping. This oversight, had synergy been a guiding principle, could have been identified and addressed collaboratively, preventing a hindrance to the Mini-Grid's seamless operation.

LESSONS LEARNT

INCORPORATING SYNERGY FROM ONSET

The crucial lesson learned is embedded in our current approach - incorporating Mini-Grid Developers and Energy Experts from project onset. This proactive inclusion ensures that potential challenges are discussed, foreseen, and mitigated collectively. By aligning perspectives from the beginning, we pave the way for continuous improvement and anticipate potential obstacles, fostering a culture of shared responsibility.

THE BEDROCK OF EXCEPTIONAL SERVICE

This lesson has become the bedrock of our commitment to exceptional service delivery. Through fostering collaboration, we not only address challenges before they arise but also create an environment where collective expertise converges for the success of each project. The Angwan Rina experience has transformed into a guiding beacon, propelling us towards an era of service delivery excellence.

In embracing the lessons from Angwan Rina, we stride forward, fortified by a commitment to synergy, collaboration, and the unwavering pursuit of delivering exceptional outcomes for our clients.
